Topics

Hint

Given a binary string `s`, return *the number of substrings with all characters '1's*. Since the answer may be too large, return it modulo $10^9 + 7$.

Example 1:

Input: `s = "0110111"`**Output:** 9**Explanation:** There are 9 substring in total with only 1's characters.`"1"` -> 5 times.`"11"` -> 3 times.`"111"` -> 1 time.

Example 2:

Input: `s = "101"`**Output:** 2**Explanation:** Substring `"1"` is shown 2 times in `s`.

Example 3:

Input: `s = "111111"`**Output:** 21**Explanation:** Each substring contains only 1's characters.

Constraints:

- $1 \leq s.length \leq 10^5$
- `s[i]` is either `'0'` or `'1'`.
